

NEW SHOPPING AND ENTERTAINMENT FORMAT – CONTINUE DEVELOPMENT EFFORTS TOGETHER!

We believe that such solutions will contribute to the further development of both business and shopping and entertainment centre.

- 1** Small size, reduced maintenance costs, high capacity.
- 2** **New-style** of breath-taking entertainment for kids.
- 3** **Target audience:** Children at the ages from 3 to 13.
- 4** **Easy to arrange and manage** (one person can watch the entire slide).

Synthetic material was invented by an Italian company to enable all athletes to ski/snowboard around the city centres, and most importantly any time of the year.

Ski courses built in the cities become real alpine skiing bases where first-timers can learn to ski and snowboard, amateurs can do their favorite sport, and professionals can train just as on the snow courses.

Synthetic material can be used to create professional sports centres for training, workouts, and competitions.

It is now possible to build fun tubing slides loved by children and adults alike in the shopping and entertainment centres.

We create ski slopes from synthetic material that give a sense of skiing and snowboarding on a compacted snow.

You can do winter sports (alpine skiing, cross-country skiing, snowboarding) everywhere and any time of the year, regardless of size.

Drawing your little fidgets into game, entertainment, and sport spaces is just another means to give you a reason to come to your favorite, family friendly shopping and entertainment centre and spend some time there.
